WITH A  
STRUCTURED  
WELL-PROVEN  
METHOD

# THE SCRIPTS

A collection of PowerShell scripts that automates manual processes  
in Qlik Sense SaaS, through Qlik's CLI.

Instead of manually having to “hardcode” the functions into a script, the module can be imported such that the functions can be called with parameters.

Our process from start to finish is a simple path and in a structured way so it's easy for clients to follow and our team have an easy organized environment to control that we have all the right information for the migration.

## Built with:

- Powershell
- Qlik-CLI
- Our Scripts

## Prerequisites:

- Excel – supplied by Stretch Qconnect
- Internet browser
