# Free Your SAP Data with Stretch Qconnect and Qlik

## Increasing demand for releasing data

To improve decision-making in a fast-paced environment, companies are seeking to become data-driven and demand faster time-to-value with self-service analytics. They need the freedom to use and combine their SAP data with multiple sources and the flexibility to apply advanced, real-time predictive analytics powered by AI/ML.

However, taking full advantage of SAP data is challenging due to its structural complexity, with tens of thousands of intricately related tables and proprietary data formats that make data inaccessible outside of SAP applications.

Many SAP customers plan to migrate to SAP S/4HANA®. This tends to be a lengthy project with disruptions to business users. Another typical challenge in SAP is data quality. By migrating poor quality data from an old SAP system to a new SAP S/4HANA®, many of the benefits of the migration are lost.

## Stretch Qconnect: Bridging the gaps

At Stretch Qconnect, our team of specialists includes SAP system expertise, ensuring a deep understanding of SAP's intricate table structures and data architecture. With Qlik's solutions and Stretch Qconnect's experience, freeze periods can be avoided by liberating SAP data to a modern cloud platform, paving the way for data warehousing and data modeling across multiple sources.

In addition, data quality can be improved and continuously monitored and controlled by data owners and clear data governance. In addition, a project-focused approach to customers adds tangible business value when customers experience a significant outcome with actionable insights and analytics.

With this expertise, Stretch Qconnect is uniquely positioned to help organizations optimize their SAP data and leverage it within Qlik's versatile environment.

### Unlock your SAP data:

- Extract data from SAP's complex tables and seamlessly connect to Qlik Cloud.
- Integrate SAP data sources for comprehensive analysis.
- Support for all SAP modules.
- Empower your business to be creative in enhancing and combining their SAP data with other data sources.

## Free your **SAP** data

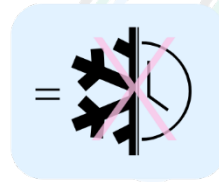

### SAP data quality:

- Support the S/4 HANA® migration project by resolving legacy data quality issues.
- Provide the business with an easy-to-use yet powerful data catalog for SAP data.
- Clear ownership of business-critical master data.
- Provide governance for continued high data quality.

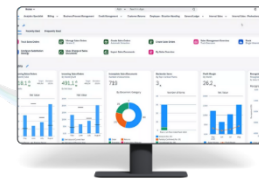

### Time-efficient migration:

- Eliminate business impact of SAP freeze periods and continue data streaming.
- Seamless transition for business users from legacy SAP to new SAP S/4HANA®.
- Real-time data ingestion (CDC streaming) from SAP with Qlik Talend Cloud (QTC).
- Harmonize data across disparate ERP systems.

# Quality assure your **SAP** data

Before moving it to **SAP S/4HANA**<sup>®</sup>

## Realize the full potential

Stretch Qconnect provides data ingestion and data transformation consulting services to support data quality projects, regardless of the data's final destination.

For organizations looking to unlock the full potential of their SAP data, Stretch Qconnect provides expert solutions to seamlessly extract, transform and integrate data into Qlik. Our specialized services ensure high-quality data transformation processes that prevent data stagnation and enable dynamic, real-time insights.

By partnering with Stretch Qconnect, organizations can unlock the full potential of their SAP data, gain a more complete view of their operations, and identify correlations and trends that may not be apparent in isolation. It's time to break out of data silos and empower your business with agile and actionable analytics.

## Want to hear more?

Read the additional material, by scanning the QR code below and sign up for our webinar about how to Unlock your SAP data for cross-source analytics in Qlik. The event will be held online on **September 26, 2:00 PM – 3:00 PM CET** with interesting **BARC** Data Analyst Timm Grosser accompanied by SAP enthusiast Martin Sahlin, CEO, **Stretch Qconnect**.

Together they will provide you with an insightful session on how to get the most out of your SAP data by migrating in to Qlik, ensuring high data quality and a ready-for-analytics data foundation, that can be enriched by all your data sources within one platform and environment, enabling a complete data-driven organization.
